DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Species II in Paper No. 11 is acknowledged.

Priority

2. Acknowledgment is made of applicant's claim for foreign priority based on an application filed in Germany on 07/10/1998. It is noted, however, that applicant has not filed a certified copy of the 198 31 022.6 application as required by 35 U.S.C. 119(b).

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

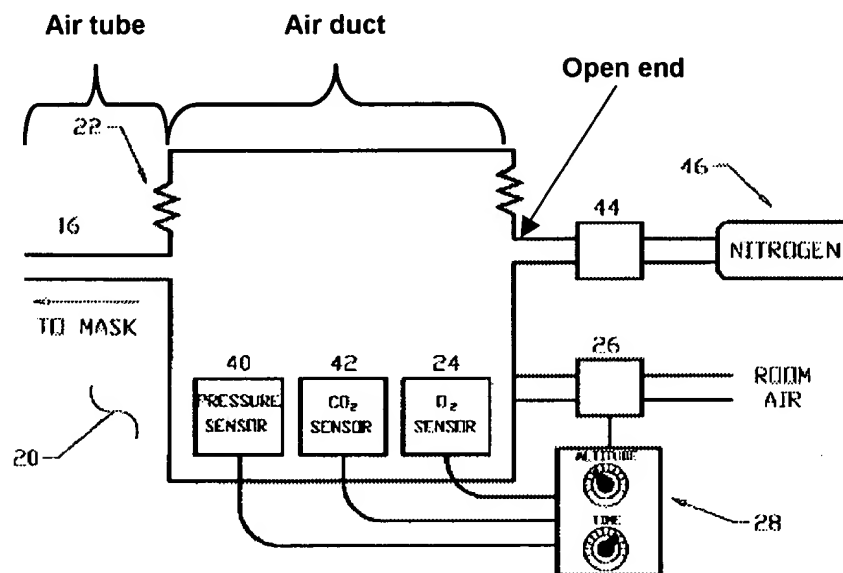

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 22 and 23 are rejected under 35 U.S.C. 102(b) as being anticipated by US 5,988,161 to Kroll.
5. As to claim 22, Kroll teaches a teaches a system for determining the carbon dioxide content of exhaled air, comprising a sensor 42 to which the exhaled air is

supplied in an analysis duct, an evaluation device **28** which is connected to the sensor and has indicating devices, an air tube connected to one end of the analysis duct, and the other end of the analysis duct is open.

**FIG 3**

6. As to claim 23, Kroll teaches the air tube connected to the inside of a mask **12** (see Fig. 1).

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claims 24-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kroll to US 5,474,060 to Evans.

9. As to claim 24, Kroll teaches is silent with regards to the mask comprising a mask adapter configured to receive the air tube.

Evans teaches a gas sampling mask comprising a mask adapter **38** receiving an air tube and is exchangeably fastened on the mask.

Therefore, it would have been to one of ordinary skill in the art at the time the invention was made to use the mask of Evans in the system of Kroll because the mask adapter makes it possible for a user to use the gas sampling system with other masks.

10. As to claim 25, the above combination teaches the analysis duct arranged in a sensor adapter attached to the mask adapter because the analysis duct is attached to the air tube, which is attached to the mask adapter.

11. As to claims 26 and 27, Evans teaches an oxygen probe **18** having an excess oxygen opening (see Fig. 1).

12. As to claim 28, Evans teaches openings **24** provided in the mask.
